

Volvo Bus. Driving quality of life

VOLVO BUS VEHICLE MANAGEMENT

A part of Volvo Bus Services

Increase uptime with optimised service and maintenance

Volvo Bus Vehicle Management is specifically developed for bus and coach operation. It's a service aimed at keeping uptime as close to 100% as possible and each necessary workshop visit to a minimum in terms of time and cost. An individual service plan gives each vehicle an optimised service interval, and by using real-time data the interval can be adapted to actual usage and driving conditions.

Individual service plan minimises standstills

Proper maintenance is the key to uninterrupted operation. However, too frequent servicing negatively impacts the number of productive hours of a vehicle. On the other hand, it goes without saying that neglected maintenance inevitably leads to unplanned repairs or even breakdowns. That's why Vehicle Management is based on an individual service plan for each vehicle.

Fine-tune with real-time data

By using the telematics-based functions your service management can go further in optimising maintenance costs. The individual service plan is based on predictions, and by following up the continuous flow of real-time data each vehicle's service plan becomes adaptive.

A powerful maintenance planning tool

Vehicle Management is a meticulously developed process. By using it to its full potential you can not only increase uptime and revenues, you will also substantially improve your workshop efficiency. You get a comprehensive fleet overview as well as detailed diagnostics for each vehicle. Together with fault codes, alerts, required parts and workshop hours, maintenance planning can be a lot more proactive.
